Diamond Gard SPC, U-Protect SPC & LVT FLOORING

EIR | Installation | Mix & Match

WWW.POWERDEKORGROUP.COM

INTRODUCTION

Cottage is inspired by the herringbone design of European traditional solid wood flooring and western decoration aesthetics, besides, Cottage patterns design is also based on real European oaks with neural color tone and fine grain texture. The collection includes 2 patterns with 11 colour options.

"Back to Nature" has been always the global aesthetic criterion in flooring industry. Except for the pursuit of real wood effect, customers also have high standards for waterproof and scratch-resistant performance to flooring products, therefore, vinyl floors, especially SPC, is chosen to be the flooring of Cottage. Cottage vinyl flooring is beautiful but also functional due to its waterproof properties as well as two special coating systems, Diamond Gard™ with ultra scratch resistance and U-Protect™ with ultra stain resistance. Additionally, optional IXPE backing can be attached under the flooring to achieve acoustic reduction, whilst the flooring can be also directly installed on any kinds of existing subfloors.

The applicable size of Cottage are as follow, however, customization is available as well.

THICKNESS

LVT Dryback: 2.0 - 3.5mm
SPC: 4.0 - 7mm
Diamond Gard™ SPC: 4.0 - 7mm

Real Wood Effect

Cottage is designed to show the natural timber features that so many desire. Real wood effect brings with them a rustic beauty, adding quality and warmth to your space. It as a perfect solution provides to both traditional and contemporary looking residential or commercial spaces.

In essence, wood effect vinyl flooring provides an artificial but realistic looking alternative, whilst it softens the look of the space. It comes in a huge range of styles, which means the customer can choose exactly what shade and style they are after, to match the rest of their spaces.

Cottage

Engineered Wood Flooring

EIR

EIR stands for Embossed in Register, which is a method used by Power Dekor to make the grain of floor much more close to the appearance of real solid wood. Power Dekor uses plate roller to make the texture perfectly lines up with the wood grains in the layer of pattern film and the process rise the authentic texture, depth, and appearance of the floor to the extreme.

Super Matte

Super Matte means the gloss level can be down to 5 degree, which makes surface to get more natural wood-like. you can also select the proper gloss to match your interior design.

Innovation

Power Dekor U-Protect™

U-Protect™
Stain resistance system
power dekor

Eco friendly — 19 toxic heavy metals free, 40 phthalates plasticizer free, formaldehyde free, extremely low TVOC emission. REACH Certified.

Stain resistance — Unique coating system makes it stain resistant, anti-bacterial and easy to clean and maintain. E.g., cleaning oily pen marks is a breeze of wind.

100% waterproof — A revolutionary composition made of polymer nano materials and natural inorganic compounds amplifies its waterproof property. Patented extra tight click prevents water from penetrating through the joints.

Power Dekor Diamond Gard™

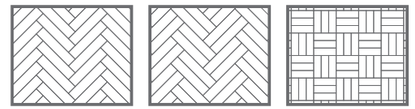

Diamond Gard™
Scratch & scuff resistance system
power dekor

Scratch resistant — Think pets' claws. Drag heavy stuffs like furniture. With Diamond Gard ™ , don't worry about scuffs.

Impact resistant — Pointy shoes, dropped objects, heavy standing furniture may cause obvious dents. No problem to face these challenges with Diamond Gard ™ .

Cigarette burns resistant — Customers may inadvertently leave cigarette butts. Make your cleaning an easy job with Diamond Gard ™ .

Valinge 5G-i™ Locking System

Cottage take advantages of Valinge 5G-i interlocking system to make flooring installation much easier. With this unique patent click system, more installation opportunities (basket, woven, etc.) are created for DIY users on housing renovation.

5G-i™ is developed to provide maximum strength and best installation experience for its particular product category.

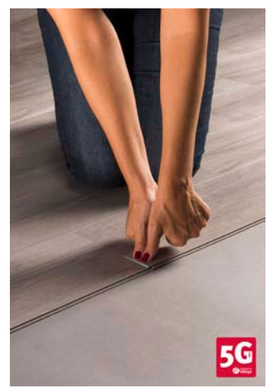

Push down installation

As a panel is folded down, a locking strip has been designed to smoothly bend due to each panel's guiding surfaces. When the guiding surfaces have passed each other, the locking strip flexes back and thereby pulls down the folded panel into a perfectly aligned and locked position.
